Climate – Non-Climate – Drive-Up

- At Burlington Self Storage we offer a number of options for our customers. We offer drive up access which is available with non-climate controlled units. We also offer climate controlled and non-climate units which are located in our enclosed buildings.
- The objective of our climate controlled units is to ensure that your belongings will be kept from freezing in the winter and will not reach a temperature of more than 90 degrees.
- Climate controlled storage keeps your belongings in a defined temperature range, whereas non-climate storage is subject to changing temperatures as the outside temperature changes.
- If you choose one of our second floor climate controlled units. We provide freight size elevators in every building along with dollies and flat carts to help make your move easier while storing with us.
- By use of an interior hallway, our inside units have less dust accumulation than traditional outside storage.
 - We recommend climate-controlled storage to reduce the harmful effects of humidity. Items we suggest keeping in climate controlled areas would be, clothes, electronics, antiques, important papers or books, cloth furniture, and wood furniture.
- No matter what storage unit you choose you can have piece of mind knowing that your belongings will be safely and securely stored at any one of our Burlington Self Storage facilities.
